The Service That Helps You Maximize Return On Investment

Audit. A review of your network infrastructure, network hardware, core applications, operating systems and desktop configurations along with 21 other areas of your business. These assessments are designed to help you improve performance, increase stability and reliability. All of which turn into higher productivity, maximized Return On Investment and increased profits.

Using the Audit, we analyze many aspects of your network.

Evaluations:

- Infrastructure/Networking
- Servers
- Firewalls
- Computer Hardware
- Phone System
- Phone Contracts
- Virus Protection
- System Backup and Restore
- Software Applications
- Software License Compliancy
- E-Communications Policies

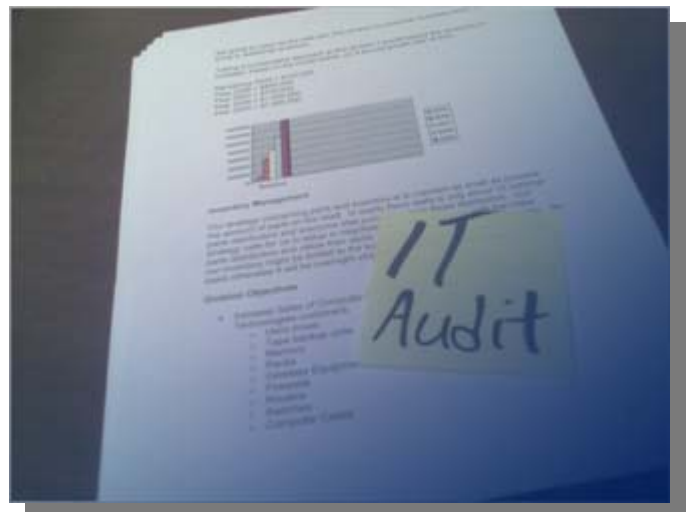

Security:

- Remote Access
- Internet
- Electronic Mail
- Applications
- Physical

Procedures:

- Disaster Recovery
- Copiers and Scanning
- Digital Storage
- Employee Training

Timeliness. Time is money. That's why with our audit process, you will have results on your desk within **30 days** after the completion of the fact gathering. An Industry Best Practices comparison will help you visualize where the weak points are in your network.

Evaluations Further Explanation:

Infrastructure/Networking—An evaluation of your network gives us the insight to understand how it was setup and what we can do to make it more efficient to improve your return on investment

Servers—Analyzing how your servers are setup and how the applications are loaded will assist us in making your network as efficient as possible. Customers have reported increased performance, stability, and reliability.

Firewalls—User permissions, how susceptible you are to intrusion, VPN connectivity, all these will keep you safe from malware and other internet negativity.

Computer hardware—Maintaining a good inventory of up-to-date hardware will keep you ahead of the curve and at the top of your efficiency.

Phone System/Contracts—Communications from across the hall and across the country along with review of your contracts to save you money.

Virus Protection—Keeping your hardware and data sheltered from virus and other malwares will protect your investments

System Back-up and Restore—These process's are key in Disaster Recovery and business continuity, we help you make sure they are suitable with the best industry practices.

Software Applications/License Compliancy—Using unlicensed software is not only unethical, it is expensive, up to \$150k per instance. We verify your licenses on all purchased software to ensure your are BSA compliant.

E-Communications Policies—These policies can often be the only thing your company has to arm itself in the event of a legal battle.

- Tampa FL
- Phoenix AZ
- Wichita KS
- Dallas TX
- Portland OR
- Houston TX

Why Audit?

An audit allows you to fully understand your IT department; giving you in-depth details about your system and how it is currently set-up. In addition, we make suggestions on what we can do to improve your set-up as compared to best industry practices.

The Benefit:

Allowing us to come in and do a complete system audit will benefit you on both sides of the table. Understanding what you already have will benefit you most when it comes to finding what you need in addition to what already you have. Furthermore, we can help you maximize your return on investment, increase productivity and in turn, increase profits.
